

What key ideas or insights you gained from today's COINE workshop?

What are your short-term and long-term research visions for COINE?

1 Short term (3-5 years)

2 Long term (10+ years)

Combine norms and interaction protocols (again) using their up-to-date approaches

Ways to renew sociotechnical systems, i.e., deploy, observe, revise values and norms

Methods for inclusive governance combining human guidance with normative computations

No more LLMS

Policy enforcement mechanisms in LLM agents execution

Open autonomous agents on the Web

Make learning-based systems more practical and scalable using COINE topics

Adaptive Agent Behavior

Flexible Interaction protocols for modern AI systems

Really social-aware MaS

Interactions among multi-agents

Meaningful Human Control

Meaningful Human Control

Deployments of normative systems in industry

longitudinal studies

Feasibility

Designing agentic systems that are controllable by their principal and by institutions

Framework for responsible agentic systems

More practical approach based on context-specific examples

Benchmarks for Ethical/Responsible Autonomy

Idk

socio-technical infrastructure for normative enforcement

Multi-agentic

Coine should dominate in LLM governance (safety, quality,...)

No more LLMS

Organizing agentic systems

Special issue

What suggestions do you have to improve the operational and community aspects of COINE (e.g., reviewing process, collaboration, communication, organization)?

Possible chair: Jessica W

Some sessions with specific research questions (might deepen discussions?)

More plenary discussions during the workshop which are always interesting

it was great
